

SafeBag MI6

Intelligent nightsafe deposit unit with armoured drum

The SafeBag MI6 deposit unit has been developed to meet the banking sector's need for an effective nightsafe solution with uncompromising security.

SafeBag MI6 is managed by an integrated PC. For emptying and counting procedures, the system offers great flexibility with regard to who can carry out the procedures and when. In the event of errors or manipulation attempts, the nightsafe deposit function is locked in a secured position and the security services are alerted.

SafeBag MI6 has been tested by ECB•S in accordance with European standard EN 1143-2 and is available with two

security levels: Grade IV and VI. The construction of the rotating drum deposit mechanism, combined with its armoured interior, enables SafeBag MI6 to resist the most modern and advanced methods of attack.

In order to protect the machine against manipulation attempts, an alarm sounds after the deposit door has been left open for a set period of time, and the drum moves into the secured position. In the event of a power cut, the unit automatically switches to emergency power via a back-up unit.
