

SafeCash Retail Deposit

Note deposit solution for improved cash management and same-day credit

SafeCash Retail Deposit is designed to make life easier for retailers. Bundles of up to 50 notes can be deposited into the machine at once and the totals are automatically recorded and accounted for. This relieves employees of cash-counting responsibilities and other back-office administration.

At the same time, SafeCash Retail Deposit helps improve cash management. The retailer benefits from same-day credit and by monitoring real-time cash levels, the CIT partner can be alerted when pick-up is due. Since the notes are deposited into a Grade III equivalent safe in bar-coded seal bags, collection is quick, simple and secure.

Through touch-screen identification, user details are also logged for complete transaction transparency and since the

cash amounts can always be monitored, this eliminates any cash-counting discrepancies.

SafeCash Retail Deposit makes up part of Gunnebo's complete range of cash deposit, collection and recycling solutions for retailers.

Benefits at a glance

- Improved cash management
- Less back-office administration
- Real-time monitoring of cash levels – better CIT service
- Same-day credit
- Complete transaction transparency – no cash discrepancies

SafeCash Retail Deposit

Note deposit solution for improved cash management and same-day credit

Configuration

All front-end interaction with the SafeCash Retail Deposit is carried out via a touch screen. This means employees do not need to carry around another card or key, but simply enter their identification code on the screen before making their deposits.

For speed, bundles of up to 50 notes can be fed into the machine at once. The notes are instantly counted and the total displayed on the screen, before a receipt for the amount deposited is printed.

For convenient CIT pick-up, the notes are sent straight into a seal bag which, uniquely for a deposit safe of this kind, is housed in a safe with protection equivalent to ECB+S Grade III.

Cash management and monitoring

The real-time cash level of each safe can be continuously tracked using Gunnebo's web-based monitoring software. This can either be hosted by Gunnebo or by the retailer, who may choose to run the programme locally or centrally.

Access to the system may be granted to CIT partners to help optimise route planning and pick-up times. Gunnebo service may also be connected to monitor the technical status of a series of machines so that maintenance and updates can be carried out before a problem occurs.

Same-day credit

As soon as notes are deposited, details of the amounts can be sent to the bank allowing the retailer's account to be credited that working day. (Note: This can only be done with the cooperation of a bank.)

Quality and environmental management systems

The SafeCash Retail Deposit is manufactured in accordance with ISO 9001 for Quality Management Systems and ISO 14001 for Environmental Management Systems.

Technical Data

Orientation	Freestanding frontload (optional TTW rearload)
Note collector	Bundles up to 50 notes
