

SafeStore Auto Maxi

Self-service safe deposit lockers

SafeStore Auto Maxi is a fully automated system of robotised safe deposit lockers located in a high-security vault. It is a compact, effective and flexible 24-hour self-service solution. The secure room may be located on the same level as the vault or on a floor above. SafeStore Auto Maxi allows you to offer the most user-friendly and convenient safe deposit

locker service possible, whilst decreasing the amount of time bank branch employees need to serve safe deposit locker customers. The accessibility and convenience of SafeStore Auto Maxi offers a great competitive advantage making it the simple and secure route to safe deposit lockers for modern banks.

SafeStore Auto Maxi

Self-service safe deposit lockers

Concept

SafeStore Auto Maxi is a fully automated system of robotised safe deposit lockers with 24-hour availability. It is a compact, effective and flexible solution. The secure room may be located on the same level as the vault, on a floor above or a combination of both. Therefore, there is no difficulty in installing the lockers in the basement and having the security room for the box delivery situated in the bank lobby – through the small tower from the SafeStore Auto Maxi. In addition to the safe deposit locker service, SafeStore Auto Maxi can function as a transfer safe and deposit system for valuables. The intelligent transportation system guarantees very short access times. Considering all costs, the functionality and availability of SafeStore Auto Maxi can give faster pay back than other safe deposit locker alternatives, while offering unparalleled convenience, safety and service to your customers.

Features

The SafeStore Auto Maxi system is very flexible and suitable for on-site assembly and configuration according to customer demands. Different arrangements of the five locker sizes allow you to customise the unit to your needs. The box delivery points can be situated in the basement, in the lobby or both. The access times are short thanks to simultaneous horizontal and vertical transportation of the deposit box. For smaller installations the SafeStore Auto Mini or SafeStore Auto Midi is available. User interaction consists of a card reader, touch screen, display and an optional biometric reader. The user guide can be easily operated via a menu and on-display dialogue. The SafeStore Auto Maxi can be administered and controlled via our SafeControl monitoring software. Three levels of security via PIN code, EC-customer card and key are available. The following options are also available: biometrics, video surveillance and a high-security electronic lock for the vault.

Design

SafeStore Auto Maxi has a modern and compact design which makes the unit very space-saving. As an innovative and flexible solution, the cassettes are dispensed at a user-friendly height either from the front of the machine or from above.

How it works

1. The customer enters a secure room with a card reader. In this "private" room the customer can access his or her locker.
2. The customer inserts his or her bank card and enters a PIN code (option: biometric identification).
3. The SafeStore Auto Maxi automatically delivers the customer's locker contents.
4. The customer uses his or her personal key to access the contents.
5. SafeStore Auto Maxi deposits the box when the customer presses the on-screen "deposit" button.

Locker Data (mm)

Max load 35kg/locker

Outer height	Inner dimensions		
	H	D	W
69	49	325	235
103	83	325	235
